## MTH-2010, FALL 2014 DR. GRAHAM-SQUIRE

## MINITEST 1 REVIEW

- Minitest 1 will cover everything from Chapters 1 and 2. While there will be a few easier, MyMathLab-type questions on the test, the bulk of the questions will be closer to the types of things we have covered in class and the questions that you find at the end of each section of the textbook. There will also be a few questions similar to the types of questions you will have on the MTEL licensure test.
- The Minitest will take about 30 minutes of class time, so you can expect it to be about twice as long as the first quiz, and will cover much of the same material.
- To prepare, I recommend you look over the materials we have used in class and end-of-section problems (there are also end-of-section practice exercises that also have answers, and these are good too. I will focus on the problems, though, since those don't have answers).
- Samantha will be doing a review session on Tuesday night at 7 pm, if you have more questions.

Although ALL of the end-of-section problems are probably good, here are some of the ones that I think are most important to look at. We will have time in class on Tuesday where you can work on these problems and ask questions, and it might be worth your while to look at them before class on Tuesday as well.

Here are the good problems to work. I know this is a lot, so if you do not want to write them all out, I recommend that you at least read over the problems and think through how you would solve them. If you are having trouble, then that is probably a good problem to work on.

- Section 1.1: #7
- Section 1.2: #10, 14
- Section 1.3: #6, 7, 13
- Section 1.4: #4, 6
- Section 2.2: #8, 12, 15, 22
- Section 2.3: #3, 9, 11, 17, 21
- Section 2.4: #7, 9, 18, 20
- Section 2.5: #3, 8, 12, 20
