## DIRECTIONS

1. Don't panic.
2. Show all of your work and use correct notation! A correct answer with insufficient work or incorrect notation will lose points.
3. Clearly indicate your answer by putting a box around it.
4. Cell phones and computers are not allowed on this test. Calculators are allowed on the first 2 questions of the test, however you should still show all of your work. No calculators are allowed on the last 4 questions.
5. Give all answers in exact form, not decimal form (that is, put  $\pi$  instead of 3.1415,  $\sqrt{2}$  instead of 1.414, etc) unless otherwise stated.
6. If you need it, the quadratic formula is  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ .
7. Make sure you sign the pledge.
8. Number of questions = 6. Total Points = 40.

1. (5 points) An arc of length 14 cm on a circle subtends a  $78^\circ$  angle. What is the radius of the circle? Round your answer to the nearest 0.01 cm.

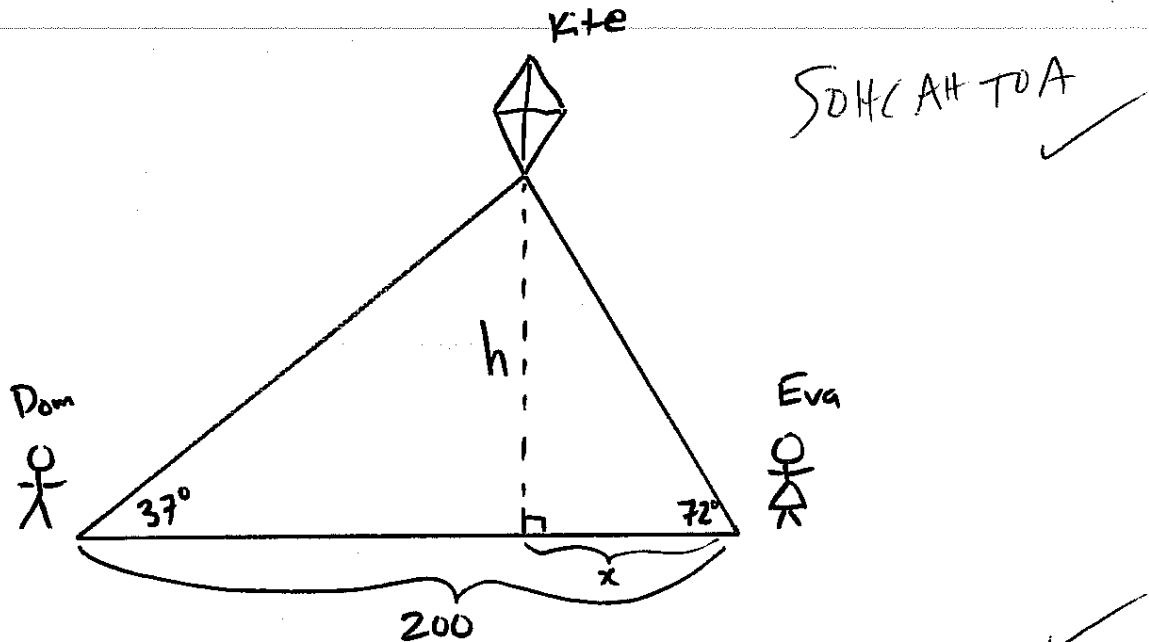

$$\theta = 78^\circ \cdot \frac{\pi}{180} = 1.36$$

$$\frac{14\text{ cm}}{1.36} = \frac{1.36 \cdot r}{1.36}$$

$$r = \frac{14}{1.36} = \boxed{10.28\text{ cm}}$$

2. (7 points) Dominic is flying a kite, and he measures the angle of elevation to the kite to be  $37^\circ$ . His sister Eva is on the other side of the kite, 200 feet away from Dominic, and she measures the angle of elevation to the kite to be  $72^\circ$ . How high is the kite flying? Use right-angle trigonometry to find the solution, and round your answer to the nearest foot.

$$\tan 72^\circ = \frac{h}{x}$$

$$\Rightarrow x = \frac{h}{\tan 72^\circ}$$

$$\tan 37^\circ = \frac{h}{200 - x}$$

$$\tan 37^\circ = \frac{h}{200 - \left(\frac{h}{\tan 72^\circ}\right)}$$

$$0.7536 \left(200 - \frac{h}{3.0777}\right) = h$$

$$150.72 - 0.245h = h$$

$$\frac{150.72}{1.245} = \frac{1.245h}{1.245}$$

$$\Rightarrow h = 121.06$$

121 feet

Test D

3. (10 points) Find the exact value of the following. If an expression does not exist, write DNE and explain why.

2 (a)  $\sin^{-1}\left(\frac{\sqrt{3}}{2}\right) = \frac{\pi}{3}$

(b)  $\tan^{-1}(-1) = -\frac{\pi}{4}$  b/c

$\tan\left(-\frac{\pi}{4}\right) = \frac{-\frac{\sqrt{2}}{2}}{\frac{\sqrt{2}}{2}} = -1$

2 (c)  $\cos^{-1}(0) = \frac{\pi}{2}$

(d)  $\tan^{-1}\left(\tan\frac{5\pi}{6}\right) = \tan^{-1}\left(-\frac{1}{\sqrt{3}}\right) = -\frac{\pi}{6}$

0.5 for  $\frac{5\pi}{6}$

(e)  $\sin(\sin^{-1}(2))$

DNE b/c  $2 > 1$

So not in domain  
of  $\sin^{-1}x$ .

4. (6 points) Find the exact value of  $\cos(\sin^{-1}(\frac{4}{5}))$ .

$$\theta = \sin^{-1} \frac{4}{5} \checkmark$$

$$\Rightarrow \sin \theta = \frac{4}{5}$$

want

$$\cos \theta = \frac{\text{adj}}{\text{hyp}} = \boxed{\frac{3}{5}} \checkmark$$

$$5^2 = 4^2 + x^2 \checkmark$$

$$25 - 16 = x^2$$

$$x = 3 \checkmark$$

5. (5 points) Write  $\cot \theta$  in terms of  $\sin \theta$ , assuming  $\theta$  is in quadrant two.

$$\cot \theta = \frac{\cos \theta}{\sin \theta}$$

$$\cot \theta = \frac{-\sqrt{1 - \sin^2 \theta}}{\sin \theta}$$

$$\sin^2 \theta + \cos^2 \theta = 1$$

$$\cos^2 \theta = 1 - \sin^2 \theta$$

$$\cos \theta = \pm \sqrt{1 - \sin^2 \theta}$$

Quad II  $\Rightarrow$

$$\cos \theta = -\sqrt{1 - \sin^2 \theta}$$

or

$$\cot^2 \theta + 1 = \csc^2 \theta$$

$$\cot \theta = \pm \sqrt{\csc^2 \theta - 1}$$

$$\cot \theta = -\sqrt{\frac{1}{\sin^2 \theta} - 1}$$

↑  
b/c in Quad II.

6. (7 points) Solve for  $x$  and  $y$  in the given diagram. Use trigonometric functions/ratios to explain your calculations and/or show your work. Leave your answer in exact form, since you cannot use a calculator. Let  $\alpha = 30^\circ$ ,  $\beta = 45^\circ$ , and  $A = 8$ .

SOHCAHTOA ✓

$$180 - 90 - 45 = x^\circ$$

$$\boxed{45 = x}$$

$$\sin 30^\circ = \frac{8}{h}$$

$$h \left(\frac{1}{2}\right) = 8$$

$$h = 16$$

$$\cos 45^\circ = \frac{16}{y}$$

$$\frac{\sqrt{2}}{2} \cdot y = 16$$

$$y = 16 \cdot \frac{2}{\sqrt{2}} = \boxed{\frac{32}{\sqrt{2}} = 16\sqrt{2}}$$

Extra Credit(1 point) Sketch the graph of the inverse sine function,  $y = \sin^{-1}(x)$ .

## DIRECTIONS

1. Don't panic.
2. Show all of your work and use correct notation! A correct answer with insufficient work or incorrect notation will lose points.
3. Clearly indicate your answer by putting a box around it.
4. Cell phones and computers are not allowed on this test. Calculators are allowed on the first 2 questions of the test, however you should still show all of your work. No calculators are allowed on the last 4 questions.
5. Give all answers in exact form, not decimal form (that is, put  $\pi$  instead of 3.1415,  $\sqrt{2}$  instead of 1.414, etc) unless otherwise stated.
6. If you need it, the quadratic formula is  $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$ .
7. Make sure you sign the pledge.
8. Number of questions = 6. Total Points = 40.

1. (7 points) Dominic is flying a kite, and he measures the angle of elevation to the kite to be  $37^\circ$ . His sister Eva is on the other side of the kite, 200 feet away from Dominic, and she measures the angle of elevation to the kite to be  $72^\circ$ . How high is the kite flying? Use right-angle trigonometry to find the solution, and round your answer to the nearest foot.

$$\tan 72^\circ = \frac{h}{x} \Rightarrow x(\tan 72) = h$$

$$x = \frac{h}{\tan 72^\circ}$$

$$\tan 37^\circ = \frac{h}{200 - x}$$

$$\Rightarrow \tan 37^\circ = \frac{h}{200 - \left(\frac{h}{\tan 72^\circ}\right)}$$

$$\Rightarrow \left(200 - \frac{h}{\tan 72}\right) (\tan 37) = h$$

$$\Rightarrow 200 \tan 37 - h \left(\frac{\tan 37}{\tan 72}\right) = h$$

$$200 \tan 37^\circ = h + h \left(\frac{\tan 37}{\tan 72}\right)$$

$$\Rightarrow \frac{200 \tan 37}{1 + \frac{\tan 37}{\tan 72}} = h = \boxed{121 \text{ feet}}$$

2. (5 points) An arc of length 18 cm on a circle subtends a  $75^\circ$  angle. What is the radius of the circle? Round your answer to the nearest 0.01 cm.

$$S = \theta r \quad \checkmark$$

$$\frac{18}{1.309} = \frac{1.309 r}{1.309}$$

$$r = 13.75 \text{ cm}$$

$$\theta = 75^\circ \cdot \frac{\pi}{180} = 1.309$$

$\checkmark \checkmark$

3. (10 points) Find the exact value of the following. If an expression does not exist, write (DNE) and explain why.

(a)  $\sin^{-1}\left(\frac{\sqrt{2}}{2}\right) = \frac{\pi}{4}$  ✓✓

(b)  $\cos^{-1}(0) = \frac{\pi}{2}$  ✓✓

(c)  $\tan^{-1}\left(\frac{-1}{\sqrt{3}}\right) = -\frac{\pi}{6}$  ✓

(d)  $\sin(\sin^{-1}(-2)) = \text{DNE}$  ✓ b/c  $-2 < -1$  ✓

(e)  $\tan^{-1}\left(\tan \frac{5\pi}{4}\right) = \tan^{-1}(1) = \frac{\pi}{4}$  ✓

0.5 for  $\frac{5\pi}{4}$

✓  
 $\tan\left(-\frac{\pi}{6}\right) = \frac{-1/2}{(\sqrt{3}/2)} = -\frac{1}{\sqrt{3}}$

4. (5 points) Write  $\tan \theta$  in terms of  $\cos \theta$ , assuming  $\theta$  is in quadrant four.

$$\tan \theta = \frac{\sin \theta}{\cos \theta} \quad \checkmark$$

$$\tan \theta = \frac{-\sqrt{1-\cos^2 \theta}}{\cos \theta} \quad \checkmark$$

$$\sin^2 \theta + \cos^2 \theta = 1 \quad \checkmark$$

$$\sqrt{\sin^2 \theta} = \pm \sqrt{1-\cos^2 \theta} \quad \checkmark$$

$$\sin \theta = \pm \sqrt{1-\cos^2 \theta}$$

Quad IV  $\Rightarrow$  sin is  $-$   $\checkmark$

5. (6 points) Find the exact value of  $\cos(\sin^{-1}(\frac{3}{5}))$ .

$$\text{Let } \theta = \sin^{-1}\left(\frac{3}{5}\right) \checkmark$$

Want  $\cos \theta$   $\checkmark$

$$\Rightarrow \sin \theta = \frac{3}{5}$$

$$3^2 + x^2 = 5^2$$

$$\sqrt{x^2} = \sqrt{16} \checkmark$$

$$x = 4$$

$$\Rightarrow \cos \theta = \boxed{\frac{4}{5}} \checkmark$$

6. (7 points) Solve for  $x$  and  $y$  in the given diagram. Use trigonometric functions/ratios to explain your calculations and/or show your work. Leave your answer in exact form, since you cannot use a calculator. Let  $\alpha = 30^\circ$ ,  $\beta = 45^\circ$ , and  $A = 6$ .

$$x + 45 + 90 = 180$$

$$\Rightarrow x = 45^\circ$$

$$\sin 30^\circ = \frac{6}{h} \quad \checkmark$$

$$h \cdot \sin 30^\circ = 6$$

$$2 \cdot \left( h \cdot \frac{1}{2} = 6 \right) \cdot 2$$

$$h = 12 \quad \checkmark$$

SO HCAHTOA

~~$$\sin 45^\circ =$$~~

$$\cos 45^\circ = \frac{h}{y} = \frac{12}{y} \quad \checkmark$$

$$\Rightarrow y = \frac{12}{\cos 45^\circ} = \frac{12}{\left(\frac{\sqrt{2}}{2}\right)} = 12 \cdot \frac{2}{\sqrt{2}} = \frac{24}{\sqrt{2}}$$

$$\text{or } 12\sqrt{2}$$

Extra Credit(1 point) Sketch the graph of the inverse sine function,  $y = \sin^{-1}(x)$ .
